Solid Green – 10/100/1000Mbps port linked

Blinking Green – Data transmitting or receiving

Off – No Ethernet link

Data LED

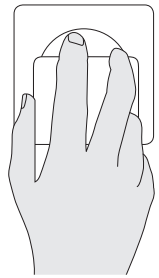
Color Green – Link rate excellent: greater than 80Mbps

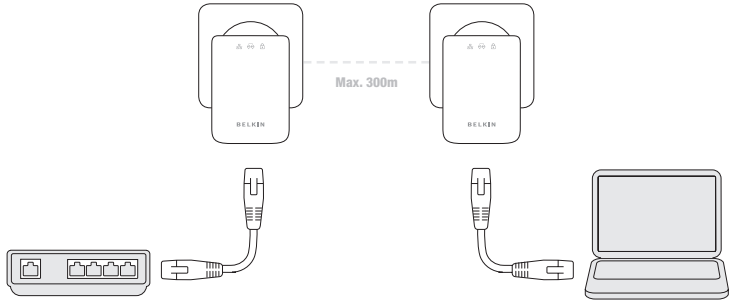
Color Amber – Link rate between 10 and 80Mbps

Color Red – Link rate less than 10Mbps

Off
– Encryption setup failure
– Adapter not connected to powerline network

Installing and Setting Up the Adapter





Belkin Powerline Network Adapters allow you to extend your network over your home's existing wiring.

1. Plug the Adapters into power outlets; one in the room with your other network equipment, and the other in a room where you would like to have network access. When the Adapters recognize one another, their Powerline Data lights will glow.

   Note: Do not plug the Adapter into a power strip; doing so may degrade network performance.

2. Connect one of the Adapters to your existing modem or router with a network cable. Use a second network cable to connect the other Adapter to a computer or other network device such as a wireless access point, set-top box, or gaming console.

3. (Optional) For greater security, use the security button on each Adapter:

(a) While both Adapters are plugged in, press the encryption button on both units for 10 seconds until the units' LEDs flash and the units reset. (This does not have to be at the same time.)

(b) Next, press the encryption button on one Adapter for less than 3 seconds.

(c) Within 1 minute, press the encryption button on the other Adapter for less than 3 seconds.

(d) The Adapters will connect and the new password will be saved to both Adapters.

Installation is complete. If step 3 was not done, you may add Powerline Adapters to the network by plugging them in.

Support

Belkin provides technical support via phone and the Web. However, we encourage you to attempt (or retry) Steps 1 and 2 before contacting Support.

If you're still having trouble, contact Belkin Support.
